New peptides and its encoding nucleic acid derived from intestinal carboxyesterase, useful as immunostimulants for treating cancer.

Claim 1; Page 3; 53pp; French.

The present sequence is derived from a human intestinal carboxylesterase (iCE) polypeptide. iCE induces specific-specific cytotoxic T lymphocytes (CTL) and secretion by these CTL of cytocoxic factors, e.g. interleukingly, interferon gamma and tumour necrosis factor. iCE polypeptides and polymucleotides are used for treating cancer, by in vivo or in vitro immunisation, particularly solid cancers and most especially hepatocarcinoma or adenocarcinoma of colon and kidney. They are also used to stimulate the immune system, and to increase, in culture, the production of associated-associated CTL, for reinjection, and/or to induce secretion of cytocoxic factors from CTL. Dendritic cells loaded with iCE are used to induce such CTL in cultures

(I) are useful for treatment of infections (bacterial, viral, protozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aureus. (I) are more hydrophilic than known avilamycins. The present sequence is that of an avilamycin synthesis enzyme from the Streptomyces viridochromogenes Avilamycin belosynthetic gene cluster (ABZ37515-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    P----PYPKDSSTEPSWRV-----AWPSCPASL-----PAQLMSSPRWWPTCLPVT 135

ICE induces specific-specific cytotoxic T lymphocytes (CTL) and secretion by these CTL of cytotoxic factors, e.g. interleukin-2, interferon gamma and tumour necrosis factor. ICE polypeptides and polynucleotides are used for treating cancer, by in vivo or immunisation, particularly solid cancers and most especially hepatocarcinoma or adenocarcinoma of colon and kidney. They are also used to stimulate the immune system, and to increase, in culture, the production of associated associated CTL, for reinjection, and/or to induce secretion of cytotoxic factors from CTL. Dendritic cells loaded with iCE are used to induce such CTL in cultures

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAHPO syndrome (syndovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample which a binding agent that binds to the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          62 SSRISPTLEATLIVSPFLA----SLRVARVCLRLLCPPYPKDSSTEPSWRVAWPSCPAS 116

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies pecific for P. acres proteins. These antibodies can be used to downregulate expression and activity of P. acres polypeptides and therefore treat P. acres infections. The antibodies may also be used as therefore treat P. acres infections. The antibodies may also be used as all agnostic agents for determining P. acres presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formed directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8 AW-LPCMMV---PCWLP-WRTWWWSSSSTAWVSWASSALETS-TQPATGATWTKWLHYAG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          6 AWSSICMSVSTRPGWMEVTRTMPRSSSRRAWVSARSAYFDAAYTPPLAGV------

The invention relates to an isolated polymucleotide (Archesta) and to immunogenic fragments of proportion across polypeptides. The invention also relates to polypeptides encoded by the polymucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention and to additionally encompasses expression vectors and host cells comprising a additionally encompasses expression vectors and host cells comprising a polypeptide of the invention; an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising P. acnes polypeptide and an isolated T cell population comprising P. acnes polypeptides, unitabodies, thusion proteins. T cell populations, or autigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne vulgaris, or for stimulating or antigen-presenting cells in an immune response specific for a P. acnes polypeptide can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the vaccine composition is useful for the vaccine composition is useful for performing a diagnostic assay. The present cand the kit is useful for performing a diagnostic assay. The present creating accompanies against P. acnes polyment composition. The vaccine composition is useful for performing a diagnostic assay. The present contained within the P. acnes polyment dorned specification, but was obtained in electronic format directly the printed specification, but was obta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Maisonneuve JL;

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed conditions. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is cuseful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food complement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The colypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic maino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 20; SEQ ID NO 60508; 103pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              virucide, protozoacide and fungicide activity. (I) are useful for treatment of infections (bacterial, viral, protozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aureus. (I) are more hydrophilic than known avilamycins. The present sequence is that of an avilamycin synthesis enzyme from the Streptomyces viridochromogenes Avilamycin A biosynthetic gene cluster (ABZ37515-
diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of deat and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the brint directly from WIPO at the wipo.int/pub/published_pct_sequences

Sequence 19938 AA;

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, aligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The

The invention relates to modulating (MI) the immune system of a mammal, comprising administering to an epithelial barrier of a mammal in need of such immune modulation, a conjugate of an antigen and an FCRN (Fragment crystalline receptor, the immunoglobulin receptor recognising the heavy chain constant region) binding partner, where the antigen is an antigen of a pathogen, autoimmune disease, allergen or tumour. Also included are comparation (comprising, a conjugate of an antigen and a carrier, where the antigen is characteristic of a tumour, and a carrier, where the conjugate is present in an amount effective for modulating partner, where the antigen is characteristic of a tumour, and a carrier, where the conjugate is present in an amount effective for computating the immune response of a mammal) a conjugate of therapeutic and a PCRN binding pattner targeted to epithelial cells expressing FCRn, and delivering (M2) molecules to a mammal, (involving administering to the mammal, a conjugate of a bioactive substance and a daninistering to the mammal, a conjugate of a bioactive substance and a conjugate of administering to the mammal, a conjugate of a bioactive substance and a conjugate of administering to the mammal, a conjugate of a bioactive substance and a conjugate of administering to the mammal, a conjugate of a bioactive substance and a confugate of a mammal. (M2) is useful for modulating the immune system of a mammal. (M2) is useful for delivering the immune system of a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antineoplastic compounds, immunoactive compounds, antimicrobial agents, parasiticides, haematologic compounds, cardiovascular drugs, respiratory drugs, neuromuscular blocking drugs, etc. to epithelial borders. The method permits more effective strategies for immunising humans. The present sequence is the protein encoded by open reading frame 1 (ORP2) of the DNA appearing as ADA37501 stated to encode human 1gG Fc which is recognised by FCRn i.e. is an FCRn binding partner.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              44 WWWIXAIKILRSSIGTWIAWRCIMPROSRGRSSITARIVWSASSPSCIRIGXMARSISA 103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        vectors, proteins, peptides, nucleic acids, polysaccharides and carbohydrates, lipids, glycoproteins, or their combinations and synthetic organic and inorganic drugs exerting a biological effect when administered to a mammal. (M2) is useful for delivering drugs such as

                                                                                                                                                                                                                                                                                This invention describes novel polypeptides and their encoding nucleic acids derived from human pancreatic tumor tissue which have cytostatic activity. The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AAY73814-Y7452 represent protein fragments encoded by the human pancreatic tumor cDNA library derived expressed sequence tag (EST) sequences represented in

The present invention relates to the isolation of novel human genes designated PHOR1-All and PHOR1-F5D6 and their encoded proteins. The gene encoding PHOR1-All maps to chromosome 1q23, and the gene encoding PHOR1-BLI maps to chromosome 1q33-q35. The PHOR1-All and PHOR1-F5D6 maps to chromosome 7q33-q35. The PHOR1-All and PHOR1-F5D6 polymucleotide and polypeptide sequences are useful in diagnostic and therapeutic methods, and compositions for various cancers such as prostate cancer. The sequences are useful for inhibiting the growth of cancer cells that express PHOR1-All or PHOR1-F5D6 and for treating be used to elicit an immune response. The present sequence from the translation of the DNA sequence for human PHOR1-F5D6 splice variant C
                                                                               Monitoring PHOR1-A11/PHOR1-F5D6 gene products for monitoring presence of cancer in subject, by determining status of PHOR1-A11/PHOR1-F5D6 gene products in tissue sample from subject and comparing it to normal sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   58 HYAGSSRISPTLEATLIVSPFLASLRVARVCLRLLCPPYPKDSSTEPSWRVAWPSCPASL 117

coequences remains and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by the treatment, prevention and diagnosis of medical conditions caused by the across. The disorders include SAPHO syndrome (synovitis, acros, pustulosis, hypertosis and obseomyellitis), uveitis and endophthalmitis. The pustulosis, hypertosis and infections of bone, joints and the central cervains system, however it is particularly involved in the inflammatory lesions associated with acros vulgaris. A method for detecting the presence or absence of P. acros in a patient comprises contacting a cample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies oppophiates may be used as antigens in the production of antibodies of therefore treat P. acros proteins. These antibodies can be used to downregulate expression and activity of P. acros polypeptides and therefore treat P. acros infections. The antibodies may also be used as diagnostic agents for determining P. acros presence, for example, by carposine in the assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was the contained in electronic forman data firectly from WIPO at

The invention relates to an isolated polymucleotide (ACF64435-ACF64733)

cocding a Propionibacterium acnes protein. The invention also relates to encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polymucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention; additionally encompasses expression vectors and host cells comprising a collymucleotide of the invention; a polypeptide of the invention; a polymetride of the invention; a polymetride and an isolated T cell population comprising T cells prepared to this method; a vaccine composition (Comprising T cells prepared polypeptide and an isolated T cell population comprising T cells prepared to polymetriceotides, antibodies, fusion proteins, T cell populations, or antiquen-presenting cells that express the polymetrion and method for inhibiting the development of P. acnes in a patient. The P. acnes polymetrides the development of P. acnes in a patient. The P. acnes polymetrides, polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the proteins, T cell populations or antigen-presenting cells that express the proteins, T cell populations or antigen-presenting cells that express the protein. The polymucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for performing a diagnostic assay. The present centaining trame) containing an immune response against P. acnes, or for treating acnes and the kit is useful for performing a diagnostic assay. The present cendant his frame contained within the P. acnes polymucleotides of the cendance cand the printed specification, but was obtained in electronic format directly the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              80 ASLRVARVCLRLLCPPYPKDSSTE---PSW--RVAWPSCPASLPAQLMSSPRWWPTCLPV 134

New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.

Claim 7; SEQ ID NO 30334; 1481pp; English.

The invention relates to an isolated polynucleotide (ALTOHAUS).

Concoling a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABMS)624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention and to calls comprising a polynucleotide of the invention; and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; and immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared to polynucleotides, antibodies, fusion proteins. T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting acts express the collypeptides are useful for inhibiting preventing or treating accounting an immune response specific for a P. acnes protein. The polynucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for them. stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present sequence represents a specifically claimed P. acnes polypeptide which is thought to contain an immunogenic region. Note: The Sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fitp.wipo.int/pub/published_pct_sequences invention relates to an isolated polynucleotide (ACF64435-ACF64733)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 32424,

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ABCHGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT PILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
PRIOR PILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 24008, Application US/09252991A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ð
                                                                                                                                       Sequence 25365, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                APPLICANT: Marc J. Rubenfield et al.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Charbonneau N.L., Reinhardt D.P., Rifkin D.B., Sakai L.Y.;
Usatent transforming growth factor beta-binding protein 1 interacts
with fibrillin and is a microfibril-associated protein.";
J. Biol. Chem. 278:2750-2757(2003).
Submir: The large latent complex of TGF-betal from platelets is
composed of the TGF-betal molecule noncovalently associated with a
disulfide-bonded complex of a dimer of the N-terminal propertied
of the TGF-betal precursor and a third component denoted TGF-BETA1.
Binds to fibrillin.
